

INSPECTION TIP SHEET

Annual inspection of your fuel-burning appliances is a critical step in protecting your family against carbon monoxide. Use the tips below to get started today.

Before the call

Find a TSSA-Registered Fuels Contractor in your community using the *Find a Contractor* tool at TSSA's safetyinfo.ca

During the call

Six questions to ask the contractor

Question #1

Are their inspection staff certified by TSSA?

Question #2

Are they able to provide inspections for all of your fuel-burning appliances?

Fireplace

Dryer

Furnace

Stove

Water Heater

Question #3

Does the inspection include the entire system?

- fuel supply
- the device itself
- chimney/venting system, areas around the device

Question #4

- Will they provide a written inspection report of the devices inspected and the results?

Question #5

- Will they be available to provide additional explanation and answer questions?

Question #6

- Will they supply an estimate?
(always get one)

After the Call

- We recommend you obtain more than one estimate
- Review the information you have gathered
- Select your contractor and book the inspection

After the Inspection

- Review your inspection report
- Ensure, if required, you ask any follow-up questions or seek clarification

The best way to avoid carbon monoxide exposure is to eliminate it at the source.
